

Additional Styles

Last Modified on 09/29/2023 2:30 pm PDT

For special situations, advanced style options may be useful in addition to the styles that are available in the editing interface. Because these styles are not available through the [drop-down menu](#), you can set them by copying-and-pasting code into the **Source Code** editor, or by using the **Custom** class option within the **Insert/Edit Link** tool and **Insert/Edit Image** tool.

HEAD'S UP: Due to the higher level of impact that these items have on university content, additional styles can only be accessed by **Global Admin** users. [Contact Us](#) for assistance.

Block Selectors

This is used for pagination or alphabetic link listings. Ideally, all link items are one character long.

Button Groups

A button group is used when you need to stack several buttons that have related tasks. This is mostly to be used in the sidebar area. Since the buttons in a group will be set to block level, the group will size to fit the parent width.

```
<div class="btn-group">
<a href="#" class="btn">Button 1</a>
<a href="#" class="btn green">Button 2</a>
<a href="#" class="btn gold">Button 3</a>
</div>
```

Color Options

Default button color is purple, but these are addition color options.

```
<a href="#" class="btn green">Green</a>
<a href="#" class="btn blue">Blue</a>
<a href="#" class="btn red">Red</a>
<a href="#" class="btn brown">Brown</a>
<a href="#" class="btn gray">Gray</a>
<a href="#" class="btn gold">Gold</a>
<a href="#" class="btn offwhite">Offwhite</a>
```

Content Widgets

Accordion Options

Linking directly to an accordion using a URL hash is currently unavailable

```
<div class="accordion accordion-plain">Accordion Content</div>
```

Hide Breadcrumbs

To hide breadcrumbs at the top of a page, edit the Source Code and insert this line of code within the **<headcode>** **</headcode>** tags:

```
<link rel="stylesheet" type="text/css" href=""/>
```

Tab Options

Select Open Tab: To link to a tab on page load, you must use the correct URL hash to match the ID of the tab title. For instance, a URL hash with #tabtitle2 would link to the tab below. All characters must be lower case with spaces and special characters removed.

Maximum Number of Tabs: Tabs may not exceed more than six tabs. This is currently not supported with the way the CSS framework works and is not an ideal best practice anyway.

Hide Tabs: To load page without any tabs shown, add the class .tabs-hide to the parent wrapper.

Icons & Extra Styles

Adding icons from our icon web font to the button class will place the icon on the left of the button text.

```
<a href="#" class="btn icon-home">Home</a>
```

There are two options for arrows facing left and right.

```
<a href="#" class="btn btn-arrow-left">Left Arrow</a>  
<a href="#" class="btn btn-arrow-right">Right Arrow</a>
```

Special buttons will animate in size when the mouse enters.

```
<a href="#" class="btn btn-special">Special Button</a>
```

To use Raleway font instead of Tungsten:

```
<a href="#" class="btn btn-sans-font">Raleway Button</a>
```

Links and Buttons

Fancy Link (a.fancy)

```
<a href="#" class="fancy">Fancy Link</a>
```

Fancy Large (a.fancy-large)

```
<a href="#" class="fancy-large">Fancy Link</a>
```

Fancy Link-Back (a.fancy-back)

```
<a href="#" class="fancy-back">Fancy Link</a>
```

Fancy Link-Back-Large (a.fancy-back-large)

```
<a href="#" class="fancy-back-large">Fancy Link</a>
```

Block Link (a.btn block)

```
<a href="#" class="btn block">Block Button</a>
```

Size options

Two size options larger and smaller from default

```
<a href="#" class="btn btn-small">Small Button</a>  
<a href="#" class="btn btn-large">Small Large</a>
```

Lists

Column List (ul.col-list)

Another option based on this is .col-list-2, which will instead do a two column layout at the widest breakpoint instead of three.

Split List (ul.split-list)

Steps List (ol.steps)

Tight List, No Bullets (ul.tight)

Section Background Colors

Off-White

```
<section class="bg-offwhite"><div class="col-sm-12"><div id="Section Title" class="section-title">Section Title</div></div></section>
```

Blue

```
<section class="bg-blue"><div class="col-sm-12"><div id="Section Title" class="section-title">Section Title</div></div></section>
```

Green

```
<section class="bg-green"><div class="col-sm-12"><div id="Section Title" class="section-title">Section Title</div></div></section>
```

Silver

```
<section class="bg-silver"><div class="col-sm-12"><div id="Section Title" class="section-title">Section Title</div></div></section>
```

Gold

```
<section class="bg-gold"><div class="col-sm-12"><div id="Section Title" class="section-title">Section Title</div></div></section>
```

Gold-Alt

```
<section class="bg-gold-alt"><div class="col-sm-12"><div id="Section Title" class="section-title">Section Title</div></div></section>
```

Gray

```
<section class="bg-gray"><div class="col-sm-12"><div id="Section Title" class="section-title">Section Title</div></div></section>
```

Short Items

These are used for a table-like listing of discrete pieces of data like upcoming events, news, faculty where an image is on the left and a set of information on the right.

Additional options on outer-most wrapper:

- **.bg-offwhite** to make background set to off-white for that block.
- **.short-item-large** makes photo and header title larger
- **.short-item-small** is a more compact size
- **.short-item-large-image** sets image aside to larger size
- **.short-item-no-border** removes top and bottom borders; good for when element is standing alone.
- **.short-item-right-inline** sets the aside to the right with content wrapping around.
- **.short-item-vertical-center** makes content area vertically centered against image aside
- **.short-item-alt** is an alternate style as seen on Events/News on main homepage.

```
<div class="short-item"> <div class="short-item-aside"> <a href="#"><span class="crop-circle" style="
background-image: url('http://earth.callutheran.edu/images/profile_photos/150/10.jpg');"></span></a> </div>
<div class="short-item-content"> <header><a href="#">William L. Bilodeau, Ph.D.</a></header> <p
>Professor of Geology and Chair, Geology Department</p> </div> </div>
```

Special Tables

Chart List (.chart-list)

This will force a tablet.chart to only view as mobile version with table rows listed full width.

Complex Chart (.chart-complex)

This is an additional class added to .chart that highlights first column. Useful for tables of information that run in both dimensions. Also switches font to an alternate sans-serif for better readability.

Chart Schedule (.chart-schedule)

An additional class to .chart that makes the first column a consistent width ideally for a set of times.

Typography

Base font size is 16px. All font sizes are defined by REM (root Ems). Any REM value is a multiplier of the base font size.

Box Background (p.box-bg)

Box background around content (margins and padding). Can be applied to DIV or P.

```
<p class="bg-box">Here is text</p>
```

Centered Text (.centered)

Centers text

```
<p class="centered">This is centered text.</p>
```

Fine Print (.fine-print)

Add to any element to scale down font size, lighten color, and set to Helvetica

```
<p class="fine-print">This is some fine print</p>
```

Info Box (.info)

Combine with fine print for extra special.

```
<p class="info">This is for your information</p>
```

Utilities

.hide-on-mobile

Hide this element on anything smaller than mobile breakpoint (less than 768px)

.hide-on-tb-tall

Hide this element on a portrait tablet size (768px)

.hide-on-desktop

Hide this element on desktops (768px and greater)

.asset

Remove margin from `<p>` around assets.

.sidebar-callout

Duplicate sidebar include into top of `#page-content` on landing page layouts.
