

# Password Requirements

Last Modified on 09/22/2023 11:09 am PDT

The Callutheran.edu website hosts content for a range of different target audiences. Although most content is intended for *prospective students and families* and is therefore available to the public, you may find an occasional need to host content that restricts access to specific audiences.

If you would like to restrict a page or section of pages to require a password, this can be added. Options exist to set access using Single-Sign On (SSO) through a MyCLU login or using a Custom Password.

## How to Add a Single-Sign On (SSO) Requirement

Single-Sign On (SSO) can restrict access via a MyCLU login to one of the following audiences, as seen in the example below:

- *Current students*
- *Current faculty/staff*
- *Current students and faculty/staff*

If you would like to add a Single-Sign On (SSO) requirement to a page or section of pages, please [Contact Us](#) with the details of your request.

PRO TIP: For **Global Admin** users who are adding the Single-Sign On (SSO) feature via Source Code...

- To add a feature for *current students and faculty/staff*, insert `<prepend>{{a:81}}</prepend>` before the tags for `<headcode></headcode>`
- To add a feature for *current faculty/staff*, insert `<prepend>{{a:795}}</prepend>` before the tags for `<headcode></headcode>`

Once the proper Single-Sign On (SSO) feature is inserted into the `<headcode></headcode>` tags, it is also possible to autofill the **Name**, **Student ID**, and **Email** fields on a page with an embedded WuFoo form. To do this, copy/paste following text into the Source Code within the Javascript embed code for the WuFoo form on the page (insert this code after the **'height'** variable and before the **'async'** variable):

- `'defaultValues':'field1=<?php echo $user['firstname']; ?>&amp;field2=<?php echo $user['lastname']; ?>&amp;field3=<?php echo $id; ?>&amp;field4=<?php echo $user['email']; ?>'`

After copy/pasting the above Source Code, edit the number of each field in the Source Code to match the **Field ID** within the WuFoo form (inspect Frame Source in web browser to see **Field ID** numbers).

# How to Add a Custom Password Requirement

Custom Password can restrict access to the following audiences, as seen in the example below:

- *Custom group (password is provided to group members)*

If you would like to add a Custom Password requirement to a page or section of pages, please [Contact Us](#) with the details of your request.

PRO TIP: For **Global Admin** users who are adding the Custom Password feature via Source Code...

- See notes for details.
